Experience

SenseUp

FullStack Developer

📅 Jul 2021 – present

📍 *Remote - Brazil*

- Designed and implemented a critical alarm monitoring system for an IoT environment, processing 500k+ monthly events, integrating business rules and automated notifications — reducing undetected critical failures by 80% and lowering average response time from 3–5 hours to 20 minutes.
- Redesigned the MSSQL database architecture into a model optimized for hierarchical data and refactored the backend to operate on the new structure, reducing the average time of complex queries from 2m10s to 35s (73% reduction) and improving the performance of heavy operations by up to 4×.
- Developed and documented integrations between legacy systems for location, machine, and inspection-point management and the IoT platform, creating REST APIs that process 2M+ records/month. The solution eliminated inconsistencies between datasets, ensured real-time synchronization (1s), and increased data reliability to 95%.
- Implemented two critical telemetry pipelines in Node-RED, integrating Dynapredict and PI System, supporting 10k+ measurements/hour with dynamic ID mapping, duplicate filtering, batch formatting, and resilient API delivery. The solution improved successful delivery rates to 99.8%, reduced ingestion failures by 90%, and enabled full monitoring via Prometheus.

Projects

Todo Manager — *NestJs, ReactJs PostgreSQL, Redis, RabbitMQ, Docker*

Jan 2025

- Built a collaborative task-management system using a microservices architecture with NestJS, including an API Gateway with rate limiting supporting 50k+ simulated requests/day and JWT authentication.
- Implemented asynchronous communication via RabbitMQ (RPC + events), processing 200k+ messages in test scenarios, with Redis caching reducing read latency by 65%, and critical PostgreSQL 17 queries responding in 30 ms.

Restora Cosmetics — *Next.js, TypeScript, TailwindCSS, Vercel*

Aug 2025

- Developed a web platform for product showcase and management for the Restora cosmetics brand using Next.js.
- Achieved advanced SEO and performance optimization (Core Web Vitals 95%), targeting improved organic traffic results.
- Implemented responsive design with TailwindCSS, ensuring consistent user experience across mobile and desktop devices.
- Automated the deployment pipeline with CI/CD, enabling continuous no-downtime releases and accelerating delivery cycles.

Education

UVV — Vila Velha University

Bachelor of Computer Science

📅 Feb 2019 – Jul 2023

📍 *ES, Brazil*

Skills

- **Languages:** Native: Portuguese — Intermediate: English
- **Technologies:** JavaScript — TypeScript — Node.js — Next.js — NestJS — .NET — Java — Microsoft Azure — Docker — Kubernetes
- **Frameworks and Libraries:** React.js — .NET Core — Spring Boot
- **Principles and Practices:** DDD — Design Patterns — SOLID — Clean Architecture — Git Flow — TDD — CI/CD
